Customer Complaint Analysis

Valrie Morrison

Problem

- Customer complaints were being reviewed manually.
- Manual sorting slowed down response times.
- High-priority complaints could be missed.
- The goal was to automate complaint classification and escalation.

Solution

- Built an AI-Powered complaint analysis workflow.
- Automated complaint categorization and urgency levels detection.
- Routed complaints based on confidence and urgency levels.
- Added escalation alerts and feedback error handling.
- Reduced manual review workload and improve speed.

Customer Complaint Analysis workflow

👉 Example flow:

1. Google Forms collects customer complaints.
2. Gemini AI analyzes sentiment and urgency.
3. Parse JSON structures the AI response.
4. Router sends complaints to the correct workflow path.
5. Google Sheets stores results and review queues.
6. Gmail sends escalation alerts automatically.

Workflow Diagram

Workflow Overview

AI Prompt

The screenshot displays the Make.com web interface. The browser's address bar shows the URL `https://us2.make.com/1939980/scenarios/5060875/edit`. The top navigation bar includes several tabs: "Final Project: Automate a Real-World...", "Customer Complaint Analysis Valri...", "make.com login - Search", and "Integration Google Forms | Make".

The main workspace is titled "Integration Google Forms" and shows a scenario diagram with a "Google Forms" component. A modal window titled "Google Gemini AI" is open, showing the configuration for a new AI action. The modal has a "Parts" section with the following structure:

- Item 1**
 - Message Type ***: Set to "Text".
 - Text ***: Contains the following prompt:

You are a customer support Analysis. Analyze customer's text and output a raw JSON object. Do not wrap response in markdown formatting or backticks (no `` `json`). Evaluate your own confidence on a scale of 1 to 5 (1 being guessing, 5 being completely certain). JSON Output Structure: { "category": "Billing" or "Technical" or "Shipping" or "General", "urgency": "High" or "Medium" or "Low", "sentiment": "Positive" or "Neutral" or "Negative", "summary": "One sentence summary of the issue.", "confidence_score": 1, 2, 3, 4, or 5 }
 - Thought Signature**: A field for a signature or note.

At the bottom of the modal, there is a "Run once" button, an "Advanced settings" toggle, and "Cancel" and "Save" buttons. A small "Cancel an email" link is visible at the very bottom of the modal.

Manual Review Trigger (Low Confidence Data)

The screenshot displays the Make.com web interface for editing a scenario. The browser's address bar shows the URL: `https://us2.make.com/1939980/scenarios/5060875/edit`. The top navigation bar includes several open tabs: 'gmail sign in email', 'Inbox (19) - valriem', 'Your project require', 'Final Project: Auton', 'make.com login - S', and 'Integration Google'. The main workspace shows a workflow diagram with three steps: 'Google Gemini AI' (Generate a response), 'JSON' (Parse JSON), and 'Router'. The 'Router' step is currently selected, and a 'Set up a filter' dialog is open over it. The dialog has a 'Label' field containing 'Low Confidence' and a character count warning: 'Must be at most 120 characters long.' Below this, a text block explains: 'Set the route as a fallback. A fallback route is a backup route that is used if the source data didn't go through any other route. One router can have only one fallback route.' There are two radio buttons for 'Yes' and 'No', with 'No' selected. The 'Condition' section shows a dropdown menu with '18. Confidence score' selected, followed by 'Numeric operators: Less than' and the value '3'. At the bottom of the dialog are 'Add AND rule' and 'Add OR rule' links. The main interface also features a 'Run once' button, a toggle for 'Every 15 minutes', and a bottom toolbar with various icons. A 'Chat' button is visible in the top right corner of the interface.

Routing Logic

Route A:

High urgency + confidence ≥ 3

Route B:

Confidence score < 3

Route C:

Fallback route for all other complaints

Error handlers capture AI or JSON failures.

AI Failure Queue (Error Handling Route)

The screenshot displays the Make.com scenario editor interface. The main scenario flow is visible in the background, featuring a 'Google Forms' module (Watch Responses) connected to a 'Google Gemini' module (Generate a response). A modal window titled 'Google Sheets' is open in the foreground, showing the configuration for an 'AI Failure Queue'.

Google Sheets Configuration:

- Table contains headers ***: Yes
- Use column headers as IDs of the columns ***: No
- Values in columns**:
 - Raw Complaint (A)**:

```
1. Answers.Please describe your experience or share any feedback in your own words.  
.textAnswers.answers[  
]: value
```
 - (B)**

At the bottom of the modal, there are buttons for 'Run once', 'Every 15 m', 'Advanced settings', 'Cancel', and 'Save'.

The background scenario flow includes a 'Google Forms' module (Watch Responses) connected to a 'Google Gemini' module (Generate a response). The flow is titled 'Integration Google Forms'.

The bottom of the screen shows the Windows taskbar with the search bar and various application icons. The system clock indicates 10:55 AM on 5/20/2026.

High urgency + confidence ≥ 3

FallBack Route

The screenshot displays the Make.com web interface for editing a scenario. A central modal window titled "Set up a filter" is open, guiding the user through setting a fallback route. The modal includes a "Label" field with the text "Fallback", a warning that the label must be at most 120 characters long, and a descriptive text: "Set the route as a fallback. A fallback route is a backup route that is used if the source data didn't go through any other route. One router can have only one fallback route." Below this, there are radio buttons for "Yes" (selected) and "No". The "Condition" section contains two empty input fields and a dropdown menu currently showing "Text operators: Equal to". At the bottom of the modal are buttons for "Cancel" and "Save".

The background shows a scenario flow starting with a "Google Forms" trigger (1) labeled "Watch Responses". This is followed by a "Google Sheets" action (10) labeled "Add a Row". The flow then branches into two paths: "1st Route B Manual..." and "2nd Route A Confidence Escalat...". Both paths lead to another "Google Sheets" action (22) labeled "Add a Row", which then connects to a "Gmail" action (32) labeled "Send an email". A "Fallback" route is indicated by a dashed line connecting the first "Google Sheets" action to the second one.

At the top of the interface, the URL is <https://us2.make.com/1939980/scenarios/5060875/edit>. The top right corner features navigation icons and a "Chat" button. The bottom of the screen has a toolbar with various icons, including a "Run once" button, a toggle for "Every 15 minutes", and a row of icons for different integrations like Google, AI, and social media.

Low Confidence Email Alert

The screenshot shows a Make.com automation scenario titled "Integration Google Forms". The scenario consists of two steps: "Google Forms" (Watch Responses) and "Google Gemini AI" (Generate a response). A modal window is open for configuring the "Gmail" action (Send an email). The configuration is as follows:

- Subject:** Low confidence score
- Body type:** Collection of contents (text, images, e...)
- Body contents:**
 - Content 1:**
 - Text:**

Hi Manager

you receive a low confidence score.

When enabled, column header names are used as stable IDs. This protects mappings when columns are added, removed, or reordered in the table. Leave it disabled if you need the module to continue working when columns are renamed (in which case, column position will be used as the ID).

Business Value

Before Automation

- Manual complaint Review
- Slow escalation process
- High manual workload
- Risks of missed urgency complaints

After Automation

- Automated classification
- Immediate routing
- Reduce repetitive task
- Automate prioritization

Business Value

- Faster response times
- Improve workflow Consistency
- Better customer consistency

Reflection & Next Steps

This project demonstrated how AI can automate customer support workflows.
AI reduced repetitive manual tasks and improved routing accuracy.
Error handling improved workflow stability.

Future improvements could include:

- CRM integration
- Ticketing system integration
- Multi-language support
- Real-time dashboards
